Agentic AI | DevOps | MLOps | SecOps | Automation | Security |
Leadership

Menomonee Falls, Wisconsin, United States

Summary

Agentic AI and DevOps Lead with extensive industry experience in software engineering, cloud platforms, and technical leadership across AI/ML, banking, and digital payments. Experienced in applying Generative AI, LLMs, and agent-based approaches to solve enterprise engineering, security, and operational challenges. Strong foundation in designing scalable AI platforms and integrating AI capabilities with cloud infrastructure, DevSecOps, CI/CD, and Kubernetes-based environments. Hands-on software engineering background with Go, Python, Java, Docker, Helm, ArgoCD, Jenkins, AWS, Kubernetes, and OpenShift, combined with a strong understanding of production systems and enterprise architecture. Proven ability to lead technical initiatives, collaborate across teams, mentor engineers, and turn emerging AI technologies into practical solutions that improve engineering productivity, security, and operational efficiency. Successfully architected secure product development frameworks for a global team of 500+ people, resulting in 100% secure and compliant product delivery.

Experience

Cisco

DevOps/MLOps Agentic AI Engineer

September 2025 - September 2026 (1 year 1 month)

San Jose, CA

Led building of Agentic AI Vulnerability Management tool to automatically fix most of security vulnerabilities (SAST and SCA) saving more than 90% of effort. Built Agentic AI Notification tool to automatically send email to stakeholders containing Open, Fixed and Deferred count of vulnerabilities including LLM based summary. Supported AI/ML and GPU-based clients and maintained CI/CD pipelines for LLM and AI/ML applications across development, testing, and production environments.

Managed Kubernetes and OpenShift platforms across hybrid cloud environments, supporting secure, scalable, and reliable application deployments. Implemented observability using metrics, logs, and traces to monitor platform health, troubleshoot issues, E2E pipelines, and improve system performance and reliability. Participated in on-call rotations, resolved critical Kubernetes, OpenShift, cloud, and application issues, and worked with cross-functional teams to improve automation and operational efficiency.

Built PowerBI reports showing the AI/ML platform information, including GPU metrics for the top-level management as stakeholders. Provided technical guidance and mentorship to team members, helping resolve issues and deliver effective solutions.

FIS

17 years 11 months

Programmer Analyst Specialist

April 2019 - August 2025 (6 years 5 months)

Milwaukee, Wisconsin, United States

Modern Banking Platform -

In this role, streamlined and automated build and deployment processes by utilizing tools such as Docker, Jenkins, and Kubernetes—including OpenShift and Azure Kubernetes Service. Led DevOps, GitOps, and SecOps that supported over 500 users involved in developing banking products. Through the use of Shell and Groovy scripting, Created and maintained efficient CI/CD workflows tailored to the specific needs of various projects, ensuring consistent and reliable deployment cycles.

In addition to DevOps responsibilities, applied programming expertise in Java and Angular to support API development and integration. This involved collaborating with backend and frontend teams to ensure seamless communication between services, improving system performance and reliability. Also played a hands-on role in diagnosing technical issues and performing in-depth code reviews to uphold high standards of code quality and maintainability.

Operating within Agile frameworks, worked closely with cross-functional teams to align development goals with business objectives. Contributed to optimizing workflows and increasing delivery speed by promoting best practices and fostering continuous improvement. Demonstrated ability to adapt quickly and communicate effectively to help drive productivity across teams

while maintaining a strong focus on delivering high-quality, secure solutions. Significantly used GitHub Copilot to automatically generate scripts and code for automation and the product.

Technical Project Lead

October 2013 - April 2019 (5 years 7 months)

Milwaukee, Wisconsin, United States

Digital Payments -

This role within a Digital Payments project allowed to focus on the architecture and development of robust backend systems tailored for the financial domain.

Specialized in designing and developing secure, high-performance web services using Java and the SOAP protocol. Also worked extensively with microservices architecture to build modular, scalable solutions capable of handling high transaction volumes and real-time processing requirements.

Collaboration was key to the success of this project. Worked closely with both onsite and offshore teams, ensuring seamless coordination across time zones. Joint efforts resulted in the successful delivery of scalable and reliable payment solutions that met strict performance and security standards.

Project Lead

February 2010 - October 2013 (3 years 9 months)

Milwaukee, Wisconsin, United States

Digital Payments -

Headed a cross-functional team working on Digital Payments web services development, ensuring seamless collaboration between onsite and offshore teams based in the U.S. Responsibilities included overseeing project planning, execution, and maintaining clear communication across time zones to keep all stakeholders aligned. Through strong coordination and leadership, drove the team toward consistent, on-time delivery while upholding high-quality standards.

In addition, played an active role in API development and integration. This involved designing and implementing reliable, scalable APIs that supported real-time digital payment functionalities. Technical and leadership contributions helped ensure smooth system interactions and enhanced overall platform performance.

Senior Software Engineer

October 2007 - February 2010 (2 years 5 months)

Chandigarh, India

Marketlive -

Led a Java development team in designing and building a robust eCommerce solution, focusing on creating scalable and maintainable architecture. Responsibilities included overseeing the entire software development lifecycle, from initial design through deployment, with a strong emphasis on code quality, system performance, and meeting delivery deadlines.

Throughout the project, worked closely with cross-functional teams—including product managers, UX designers, and QA engineers—to ensure technical solutions were aligned with business requirements. This collaborative approach allowed to develop a user-centric platform that delivered both functional excellence and a seamless customer experience.

Sapient

Senior Associate - Technology Level II

January 2005 - October 2007 (2 years 10 months)

Gurugram, Haryana, India

Developed robust API solutions for a leading telecom company to enhance their system capabilities and improve integration with various internal and external platforms. These solutions were designed to optimize performance, ensure scalability, and support the company's growing operational needs.

To ensure the seamless implementation of the APIs, I traveled onsite and worked closely with the client's technical and business teams. This hands-on engagement allowed me to provide real-time support, troubleshoot deployment issues, and align the solutions with the client's infrastructure and workflow requirements.

By being present during the critical phases of implementation, I was able to ensure system stability and address challenges immediately.

Tech Mahindra (formerly Mahindra Satyam)

Software Engineer

June 2003 - January 2005 (1 year 8 months)

Secunderābād, Telangana, India

MEIDAS -

Provided technical support for a client's HR system by directly engaging with the customer to understand their concerns and requirements. Through active communication, accurately diagnosed and resolved system issues, ensuring

smooth day-to-day operations and a positive user experience. The approach emphasized responsiveness and a deep understanding of the system's functionality from the user's perspective.

Played a central role in bridging communication between the technical teams and end users. This allowed for efficient issue resolution and clear understanding on both sides. By consistently delivering timely and effective solutions, helped maintain system reliability and built strong client trust through dependable support.

Netsoft

Software Engineer

October 2001 - May 2003 (1 year 8 months)

Chandigarh, India

Collaborated with a team to develop an administrative computer monitoring tool called Computer God, using C++. The tool was designed to track and visualize team activities in real time, offering insights into system usage and user behaviors.

This solution significantly enhanced project oversight by providing managers with actionable data to assess productivity, identify bottlenecks, and support performance management. The collaborative development process ensured that the tool aligned with organizational needs and delivered measurable value.

Inde Associates Pvt Ltd

Software Engineer

November 2000 - September 2001 (11 months)

Chandigarh, India

Worked closely with a team to develop web applications leveraging Microsoft technologies. Contributed to both front-end and back-end development to deliver a seamless and efficient user experience.

Education

Giani Zail Singh College of Engineering & Technology, Bathinda

Bachelor of Engineering - BE, Electrical Engineering Technologies/

Technicians · (September 1995 - May 1999)
